connectivity

Color display

The Desk/5000 is the most innovative payment tool around, taking advantage of both business applications and broadband connections to external devices. The Desk/5000 responds to the most demanding types of use, thereby transforming the point of sale into a point of service.

Maximum security

The Desk/5000 meets the latest security requirements. It is PCI-PTS 4.x certified and designed to comply with all local regulations. Its TELIUM Tetra operating system uses the latest cryptographic methods with a scalable key length.

All payment options

Desk/5000 enables CCP couponing and wallet usage, in addition to EMV Chip & PIN EMV cards, Swipe & Sign cards and contactless cards.

Intuitive and user-friendly interface

Equipped with powerful multimedia capabilities and a 3.5-inch touch screen, the Desk/5000 offers you the best user experience quality through a sophisticated interface and a wealth of business applications.

Maximum network availability

In addition to Ethernet and the modem, the Desk/5000 offers a wide range of radio connectivity via GPRS, 3G, dual SIM, Bluetooth and WiFi. This optimises network availability and communication costs.

Integrated CCP payment

The Desk/5000 encourages contactless payment by offering its customers an instantaneous experience through a specially designed card reading area and faster transaction flows.

Electronic signature for payment and business applications

The Desk/5000 has electronic signature capture capabilities for electronic payments, receipts storage and new business applications, such as contracts or warranty and registration programmes.

An operating system with secure payment and creative freedom

Drawing on 30 years of experience, the TELIUM Tetra operating system perfectly combines Ingenico Group's legacy in terms of payment and openness to the internet. It integrates the best security mechanisms to protect the confidentiality of transactions, while allowing the deployment of HTML5 professional internet applications.
