

Move/5000

Increase your sales with the mobile solution that delivers on the latest innovations

- Accept electronic payments wherever you are. Move 5000, the mobile solution adapted to all new technologies
- Take advantage of a new experience combining payments with business applications, complete with an improved user interface
- Adopt a broad range of payment methods
- Respond to the most demanding types of use through the many innovative features it contains

The Move/5000 changes the rules of the game by introducing a wide range of business applications in the field of portable payment terminals.

Maximum security

The Move/5000 is PCI-PTS 4.x certified. Its TELIUM Tetra operating system uses the latest cryptographic methods with a scalable key length.

All payment options

The Move/5000 enables CCP couponing and wallet usage, in addition to EMV Chip & PIN EMV cards, Swipe & Sign cards and contactless cards.

Intuitive and user-friendly interface

Equipped with powerful multimedia capabilities and a 3.5-inch touch screen, the Move/5000 offers you the best user experience quality through a sophisticated interface and a wealth of business applications.

Designed for mobility

Designed to be used both indoors and outdoors, the Move/5000 fits in your pocket and its battery lasts longer. It is the perfect companion for retailers.

Built-in data capture capabilities

With barcode scanner and GPS tracking, the Move/5000 offers alternative payment methods and boundless possibilities for business applications.

Maximum network availability

Thanks to continuous wireless connectivity (3G, GPRS, Dual SIM, Bluetooth and WiFi), the Move/5000 offers the greatest flexibility of possible contact points while optimising communication costs.

Integrated CCP payment

The Move/5000 encourages contactless payment by offering its customers an instantaneous experience through a specially designed card reading area and faster transaction flows.

Electronic signature for payment and business applications

The Move/5000 has electronic signature capture capabilities for electronic payments, receipts storage and new business applications, such as contracts or warranty and registration programmes.

An operating system with secure payment and creative freedom

Drawing on 30 years of experience, the TELIUM Tetra operating system perfectly combines Ingenico Group's legacy in terms of payment and openness to the net. It integrates the best security mechanisms to protect the confidentiality of transactions while allowing the deployment of HTML5 professional internet applications.
