

PRESS RELEASE

INGENICO HAS OBTAINED CB5.2 APPROVAL FOR ITS GPRS i7910 AND i8550 PAYMENT TERMINALS

Neuilly-sur-Seine, March 15, 2007

Ingenico, a world-wide payment and secure transactions service provider obtained CB5.2 approval on January 23, 2007 from the French organization "Groupement des Cartes Bancaires", for its GPRS i7910 and i8550 terminals. These terminals are part of the Ingenico terminal range based on UNICAPT 32 architecture, and are now able to reach the French market with their GPRS version, which has been defined as a strategic market for the Group.

With this new approval, Ingenico is now able to respond efficiently to the ever-growing demand in the French marketplace for mobile solutions. The GPRS i7910 and i8550 terminals are ideal solutions to the needs expressed by restaurants for payment at the table, for delivery people, mobile law enforcement officers, postal services, traveling salespeople, etc. In all of these cases, they are able to improve the productivity of those working in the field, as well as the quality of services provided.

The i7910, a GPRS mobile terminal for all mobility needs

The i7910 is a new GPRS payment terminal solution that optimizes costs and performance in both indoor and non-aggressive outdoor environments. Its ergonomic, compact, and lightweight design provides comfort and robustness to different kinds of users. The i7910 terminal is the ideal solution for hospitality and mobile applications.

The i8550, a rugged GPRS data capture mobile multi-function terminal

Business professionals are looking to integrate real time data management and secure payment services for their mobile environments. Equipped with the latest wireless technology, a barcode reader, and a large color touch screen display, this "all in one" mobile terminal is the only solution on the market today that includes secure payment functions and multiple applications (such as managing rounds, stock, tables in a restaurant, etc) in a robust and user-friendly terminal.
