

## PRESS RELEASE

### Ingenico launches a single-payment Solution for Italian Petrol Stations

**Paris – May 6, 2013.** Ingenico (Euronext : FR0000125346 - ING), leading worldwide provider of payment solutions, today announces it will supply Italian Petrol Stations with a payment solution, through a single terminal enabling to accept most professional cards.

The H24 solution provides petrol stations with the integration of their own systems with faster operations and gives them greater control in the transactions processed, with a fully secure system. In the first stage, the solution is aimed at independent petrol stations in order to offer their customers added-value services, and it includes the management of fuel cards of the main

international operators. In the second stage, the solution will include the management of any bank card. The target is to equip over 1.000 stations by end of 2013.

This application is available for the Spanish Petrol market since August, 2010, and now in Italy. The H24 mobile application will also be available free of charge on Google Play and in the App Store: it is intended for any person downloading it to perform certain functions from their mobile, such as planning travel routes, finding the geographical location of petrol stations, detecting radar, etc., and even blocking H24 cards.

Ingenico Italia is entrusted with the marketing and distribution of the terminals, and Ingenico Iberia deals with licence for use of software, the lines of communication, the software of the terminal in Italian, and the technical support guarantee.

The selected terminals are the [iCT250](#) and the [iWL250](#). The desk top terminals iCT250 have a compact and ergonomic design. One EMV contactless payment option, approved by MasterCard and Visa payWave, accepts payments with a card and through NFC. The iWL250 is a pocket payment terminal and with 3G connection, which makes it possible to pay in different ways, including chip card reader, magnetic strip and signature recognition. They are designed to comply with security standards, as well as EMV and PCI PTS 3.x. Both are based on Ingenico's powerful platform Telium 2, which guarantee effectiveness for increasingly quicker, more practical and more reliable transactions.

## **About Ingenico (Euronext: FR0000125346 – ING)**

*Ingenico is a leading provider of payment solutions, with over 20 million terminals deployed in more than 125 countries. Its 4,000 employees worldwide support retailers, banks and service providers to optimize and secure their electronic payments solutions, develop their offer of services and increase their point of sales revenue.
