pocket sized

2-slot

■ A compact, high-performance portable terminal.

- The iHC200 is a portable smartcard terminal (two contact card slots) for use on the go.
- Based on the latest technology, the iHC200, which embeds standalone applications, makes it possible to process transactions with one or two cards simultaneously. It can be connected to a computer via a USB port for the exchange or transfer of any data or files.
- Light and compact, the iHC200 fits easily in a shirt pocket. Two alkaline batteries give it high autonomy, powering it for several months of normal use.
- Its graphical display provides optimum readability on one, two or three lines and of special icons.
- A software development kit allows to develop embedded applications according to your specific needs.

User benefits

- Very compact and lightweight, it is easy to carry around.
- This high-performance reader, with its ergonomic shape, is the ideal choice for professional applications.
- Its high battery autonomy is an essential asset for professionals who spend much of their time working in the field.
