

mPOS EMV SDK

Easily integrate EMV payment acceptance into your mobile apps – in minutes

- Avoid EMV certification bottlenecks
- Future proof your payment solutions with our range of mPOS card readers
- Connect your solution to multiple processors
- Meet PCI requirements without the hassle
- Gain speed to market using a developer-friendly toolkit

Our mPOS EMV SDK provides a fast path to EMV with an all-in-one tool kit, removing the payments complexity and certification bottlenecks for developers

iOS & Android SDKs

The iOS & Android SDKs provide integration with the full range of Ingenico Mobile Solutions card readers and our EMV Gateway. Our libraries take your application out of the transaction flow and EMV certification process enabling you to get to market quickly, without requiring familiarity with the complex world of payments.

Boarding & reporting APIs

Our REST APIs enable you to seamlessly accommodate the merchant boarding process with your solution and leverage gateway reporting data to enhance your offer by providing transaction data or analytics.

A range of mPOS card readers

Our mPOS card readers give access to the latest in payment acceptance technology, with a single integration across the entire range of Ingenico Mobile Solutions mPOS devices. Our full suite of EMV-enabled mPOS card readers support EMV chip & sign/chip & PIN, NFC/contactless, and magstripe. As new devices are available, you will be able to easily integrate our next generation card readers with the same ease.

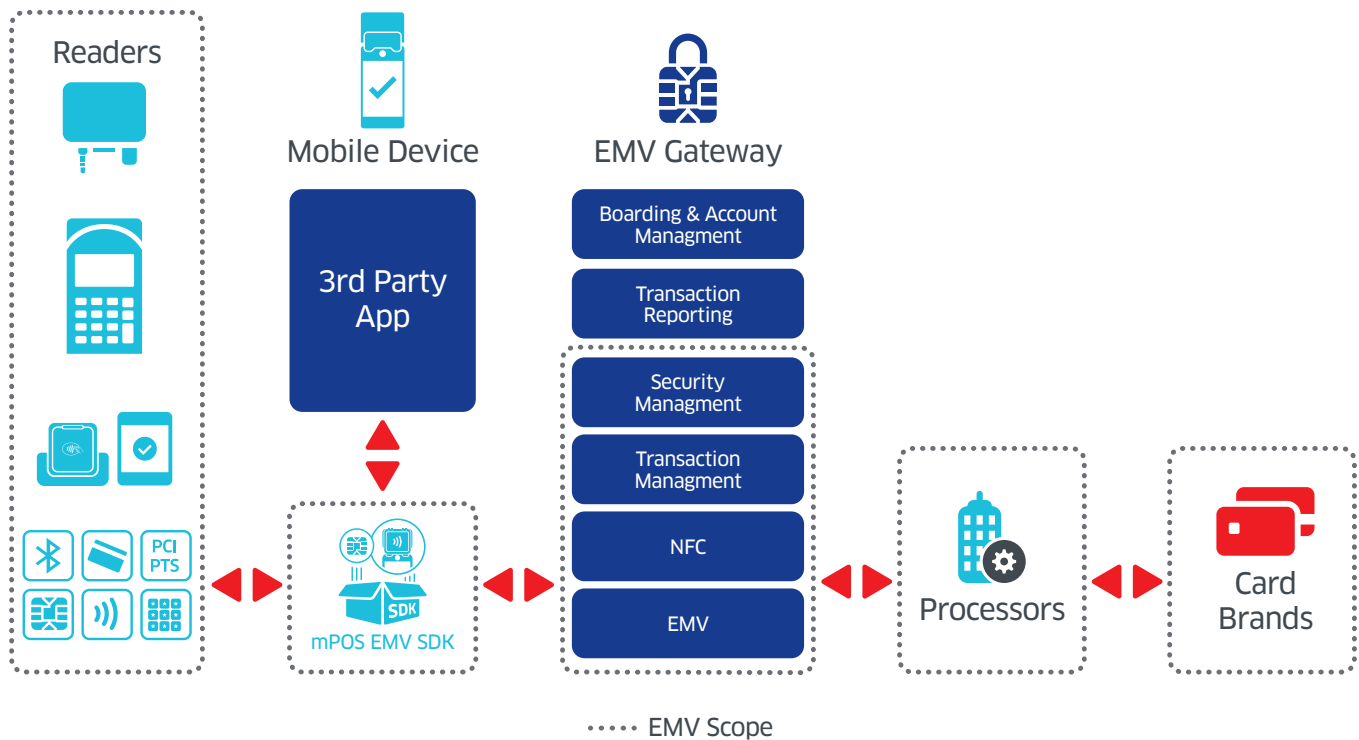

SDK documentation & sample code

We provide a comprehensive set of developer materials including, detailed SDK documentation, sample code, and sample applications to help quickly and easily build your mobile application. You are able to start running transactions right away.

A dedicated SDK support team

Customer support is a primary focus at Ingenico Mobile Solutions, and we provide a dedicated application support team to ensure that developers are serviced by knowledgeable experts at Ingenico Group. Developers and software pros are available for support. The team is well-trained and ready to guide you through the already simple implementation process, should you have any questions.
